SPOTLIGHT ON

Storage

The information age is here. We've certainly come a long way from the first mass produced PCs that shipped with floppy disk drives and no hard drive! Every day businesses and home computer users deal with millions of megabytes of electronic information making storage devices among your computer's most vital components. All the information that is created needs to be saved, shared and protected and there's many different methods and devices that can be used to achieve these tasks.

Why do you need storage devices?

Storage devices are generally used to back up and share data that's stored on computer hard drives. If your hard drive crashes, and it's the only place you've stored your files, you can say goodbye to your data! All computer users should implement a backup routine so that if disaster strikes, data can be recovered quickly and easily.

With the popularity of digital photography and multimedia, sharing large data files has become a basic requirement for most computer users. It's not always feasible to e-mail files so having a way to produce CD or DVD data discs is one of the best ways to share data.

STORAGE DEVICES

External Hard Drives

External hard drives are a great way to easily extend the storage capacities of your internal hard drives. These drives usually connect to your computer via a USB or FireWire port so make sure your PC has the right connection. USB is the more common connection type, although FireWire offers greater transfer speeds.

DVD Burners and Media

DVD burners are becoming more and more affordable with most offering capacities of up to 4.7GB on a single-sided DVD-R or DVD-RW disc and up to 9.4GB on a double-sided disc. Look for a double layer DVD drive as they can be used to store nearly twice as much data – up to 8.5GB on a single-sided DVD disc! DVD burners are available as either internal or external drives. An internal drive may cost less but you'll have to open your computer up to install it. If you're not computer savvy, an external drive might be the best option. Like external hard drives, they are significantly more portable and easier to share and usually have a USB or FireWire connection.

When shopping for CD and DVD media, bear in mind that some cheaper discs are prone to errors, may not last as long, and could create compatibility problems with the devices you plan to play the discs in.

Digital Storage Media & Devices

Flash Memory Cards: A number of today's digital devices such as digital cameras include a slot for flash storage media cards. The most popular formats are CompactFlash, Memory Stick, Secure Digital (SD) and xD-Picture cards. When you buy the device, make sure you check what type of storage media it requires.

USB Flash Drives: The floppy is officially dead! One of the hottest gadgets on the market today is the USB flash memory drive. These compact high capacity devices act like a portable hard drive and slip easily into your pocket. Just plug your USB flash drive into the USB port of your computer to add and delete files as many times as you like. Some drives even offer both digital storage and digital music capabilities in the one device!

DATA PROTECTION SOLUTIONS

Different **types** of businesses

Different **storage management** needs

Same **intelligent** solution

BrightStor r11.1

Intelligent Storage Management

BrightStor ARCserve Backup r11.1

One of the most critical assets of any organisation is its data. From files on individual notebooks to databases on mainframes, data availability – that is, ready access to needed information – is critical for businesses to function and grow. Retaining and protecting certain types of data is also often a regulatory requirement. With all the potential chances for data loss – hardware failure, human error, malicious acts, fire, flood, theft, virus infection and so forth – every organisation needs to safeguard its data to help ensure its continued availability.

BrightStor ARCserve Backup r11.1 is a single-product data protection solution that provides the ease-of-use small organisations expect, together with the features and capabilities large companies demand.

BrightStor ARCserve Backup r11.1 enables customers to manage backup/recovery operations across heterogeneous environments, improving the efficiency of backup operations and ensuring protection of critical assets across multiple platforms within the organisation.

Key features of BrightStor ARCserve Backup r11.1 include:

- Single integrated product across Windows, NetWare, Linux and UNIX platforms.
- Built-in centralised and cross-platform management.
- Integrated backup to disk.
- Virus protection and data security.
- Multiplexing / multi-streaming.
- SAN- and NAS-based backups.
- VSS hardware snapshot support.
- Wide platform and application support.
- Streamlined licensing and installation with zero points entry into CA's Open Licence Program (OLP).
- Easy to use – simple to install and initiate the first backup.

BrightStor r11.1 is more than software - it's intelligent storage management.

For more information on BrightStor r11.1 visit *www.ca.com/offices/australia*

Get the benefits of licensing without the hassle of minimum entry points!

The CA Open Licence Program (OLP) now has no minimum entry point requirement, so you can obtain all the benefits of licensing:

- Streamlined deployment – single licence key for multiple installation
- Lower cost of ownership
- Automatic product registration
- Maintenance (telephone technical support and upgrade protection)
- A choice of one, two or three year maintenance options

FREE UPGRADE OFFER

Customers who purchased BrightStor ARCserve r11 for Windows anytime since its release in February, are entitled to download the update to r11.1 completely free of charge. The update is available at http://supportconnect.ca.com

Speak to your CA Reseller for further information and pricing details.

COMING SOON!

Imation DVD+/- R/RW 16X Dual Layer Internal Drive

Double the layer, twice the reliability!

The new Imation Dual Layer burner is a breakthrough. You can put 8.5GB storage capacity on a DVD disc, without needing to turn it over. This equates to four hours of DVD-quality video or 16 hours of VHS-quality video. It is ideal for storing important personal and business data, from home movies, music and photographs to backups of important files, applications, presentations and reports.

MMM0030 $259 RRP

Imation DAT72 Cartridge

Imation DAT72 cartridges continue the legacy of the 4mm DDS format. DAT72 drives, developed by HP and Certance, address the needs small business users face in relation to secure backups and protecting their data.

The DAT72 drive is also read/write compatible with DDS3 (12GB) and DDS4 (20GB) cartridges. DAT72 cartridges are designed exclusively for DAT72 drives and libraries.

- 72GB compressed capacity.
- Up to 3MB/second native (6MB compressed) transfer rate.

MMM6158 $42.90 RRP

Imation Disc Stakka

An automated carousel that gives you a simple and efficient way to manage and protect your disc library. Each unit stores and protects up to 100 data CDs, DVDs, music or game discs and links to your computer via a USB connection.

MMM1214 $199 RRP

Imation USB 2.0 Flash Drive

The Imation USB 2.0 Flash Drive is a compact, powerful flash drive. Featuring a unique "never lose" cap swivel design to give you the sophisticated, professional look you seek from your personal technology. Weighing only 29 grams, the drive fits easily around your neck, in your pocket or briefcase giving you convenient access to your drive anytime, anywhere you are. Featuring lightening fast USB 2.0 drive speed —data can be read up to 8MB/second and written up to 7MB/second — saving you valuable time when transferring, sharing or storing your critical data.
